

Research Practicum in Replicable & Reproducible Cognitive Neuroscience

PSYC4172-01

INSTRUCTOR

Dr. Jason Geller

DAY & TIME

Thu 4:00–6:30 PM

LOCATION

McGuinn Hall 332

SEMESTER

Fall 2026

This hands-on practicum introduces students to the principles and practices of **open, replicable, and reproducible psychological science**. Students work in teams to design and conduct a close replication of a published psychology experiment using the Human Neuroscience Laboratory (HNL).

By the end of the course, you will have completed a preregistered replication study, produced a fully reproducible research report, and presented your findings in a conference-style poster session.
